

Modul-System launches an internal ladder holder

Modul-System is introducing an internal ladder holder for service vehicles.

"Our new ladder holder is very flexible and will fit most van models and different types of ladders", explains Thomas Johansson, Vice President of Modul-System.

There are several benefits connected to storing the ladder in the cargo space, among other things it will get less dirty and the risk of theft is minimized. Furthermore, the internal solution will not increase the vehicle's wind resistance.

"By not placing the ladder on the roof, you also avoid increasing the fuel consumption, and hence the amount of emissions. In other words, it is positive for both your wallet and the environment", explains Thomas Johansson.

The holder is designed for safe and efficient storage of a ladder in the ceiling of the cargo compartment. The ladder is hooked onto the front bracket, pushed back as far as possible, hooked onto the rear bracket and then released. The smart gas strut solution then holds the ladder in place whilst driving, and also facilitates loading and unloading. "We always strive to simplify the daily work for our customers and make it more efficient", says Thomas Johansson.

Modul-System's new ladder holder is specifically designed to take up as little space as possible. It is also adjustable in length and height to fit different van models and ladders, all in order to meet as many different needs on the market as possible.

About Modul-System

Modul-System develops, manufactures and installs racking systems for service vehicles. The company is represented in 50 countries and has over 40 years of experience in the industry. Modul-System is part of the Lifco group. The head office is located in Mölndal just outside Gothenburg. For more information, please visit www.modul-system.com.
